

Experiment No. 13

- **Aim**

To analyze student marks and manage student results using MS Excel.

- **Objectives**

To enter and organize student data in Excel.

To apply Excel formulas for calculating results.

To analyze student performance.

To create charts for visual representation.

- **Tools / Materials Required**

Computer System

MS Excel

- **Procedure**

Open MS Excel and create a new worksheet.

Enter student details such as roll number, name, and marks.

Apply formulas to calculate pass or fail.

Use Excel functions to analyze student results.

Create charts to represent student performance.

The screenshot shows the Microsoft Excel interface with a table of student marks. The table is located in the range A1:F6. The columns are labeled: ROLL (A), Student Name (B), Marks (D), Result (E), and Remark (F). The data rows are as follows:

ROLL	Student Name	Marks	Result	Remark
1	Rahul Sharma	78	pass	Good
2	Neha Verma	42	pass	Average
3	Amit Singh	35	fail	Need Improvement
4	Pooja Yadav	90	pass	Excellent
5	Abhishek Yadav	91	pass	Excellent

• Result

Student marks were successfully entered and analyzed using MS Excel.

Pass and fail results were obtained and student performance was visualized.

• Conclusion

MS Excel is an effective tool for managing and analyzing student results using formulas and charts.
