

Experiment No. 14

Sales Data Workbook

- **Aim :-**

To analyze sales data using Excel formulas and charts.

- **Objectives :-**

To use SUMIF formula for conditional sales calculation.

To sort and filter sales data.

To extract text using LEFT and RIGHT functions.

To represent sales trends using charts.

- **Tools / Materials Required :-**

Computer System

MS Excel

- **Procedure :-**

Open MS Excel and create a new workbook.

Enter sales data such as date, product code, category, and sales amount.

Sort and filter the data to analyze specific categories or periods.

Apply SUMIF function to calculate total sales based on conditions.

Use LEFT and RIGHT functions to extract required text from product codes.

Create a line chart to show sales trends.

Protect the worksheet to prevent unwanted changes.

• Result

Sales data was successfully analyzed using Excel formulas and charts.

Conditional totals and sales trends were obtained.

• Conclusion

MS Excel is an effective tool for analyzing sales data using formulas, filters, and charts, while maintaining data accuracy.
