- **AI vs Human Writing**

(a) Human-Generated Content (By Student)

Topic: “Will AI replace jobs or change them?”

Artificial Intelligence will not completely replace jobs, but it will surely change how people work. Many repetitive tasks like data entry, billing, and customer support are already being done by AI. However, this does not mean humans will become useless. Instead, people will move toward jobs that need creativity, decision-making, and emotional understanding. For example, teachers, designers, doctors, and managers will still be needed, but they may use AI tools to work faster and better. New jobs such as AI trainers, data analysts, and machine learning engineers are also being created. So, AI is not a threat to employment but a tool that transforms the way we work. Humans who learn new skills will have better opportunities in the future.

(b) AI-Generated Content (By ChatGPT)

Topic: “Will AI replace jobs or change them?”

Artificial Intelligence is changing the nature of work rather than eliminating it entirely. While automation may reduce the need for certain routine and manual jobs, it also opens doors to new roles in technology, data analysis, and system management. AI can handle repetitive tasks efficiently, allowing humans to focus on creativity, strategy, and problem-solving. Industries like healthcare, education, and business are adopting AI to improve productivity, not to remove workers. As technology advances, employees will need to reskill and adapt. Overall, AI is more likely to reshape the job market by creating new opportunities and changing existing roles instead of completely replacing human workers.

Human-Generated Content		AI-Generated Content
Written in simple student language		Written in formal and polished language
More emotional and persona		More neutral and factua
Includes examples like teachers, designers, doctors		Focuses on industries and technology
Slightly informal tone		Professional tone
Shows student's own thinking		Well-structured and balanced
